

UNYKORN IMPACT & INNOVATION REPORT • EDITION 2026 • COMPANION

# The *Estate*

Sixteen zones, one inventory: how a sprawling edge network became something that can be audited, corrected and rolled back.

UnyKorn LLC   September 2026   Edition 1.1

# Why it exists

By August 2026 UnyKorn's public surface had grown to sixteen zones and more than three hundred hosts, deployed from several machines and several sessions, with no single list of what existed or what each page claimed. The inventory classified every host by what it actually serves, and more than a third of them serve nothing.

The estate project produced that list, then a gate that reads every served page for claims we must not make, then a discipline that every deploy carries a receipt with its rollback version, and now a ledger from which this report is rendered.

Verify the served response, not the repository. A green build that serves the old page is a red build.

# Global context

Cyber-espionage and warfare sit among the leading short-term risks in the WEF survey. An edge network with no inventory is exactly the kind of surface that fails quietly; the estate work exists so that the whole network can be audited by one person in an afternoon.

# What we built

Three tools and a repository. The inventory snapshots zones, DNS hosts, routes and Workers into JSON with a timestamp. The copy-accuracy gate fetches every host and flags custody claims, registration claims, guarantees and partner names that lack a source. The deploy tools upload assets with correct content types and record bindings, and every receipt names the version to roll back to.

## INVENTORY

### One list

Zones, hosts, routes and Workers, dated, each host classified live, stub, dead, blocked or dark.

## GATE

### Copy accuracy

Rules for custody-brand names, registration claims, guarantees, partner assertions; a report per run with severity and the offending sentence.

## RECEIPTS

### Deploy and rollback

Each release lists what went where, the served check that proved it, and the previous version id.

## LEDGER

### This report

Every figure a row with a label, a method and a re-runnable command; a guard that fails the build on an unsourced number.

# How it works

Where a page cannot be edited at source quickly, the edge rewrites the served HTML with a rule that names its source. The rule list is the changelog.

# What is real today

Every row is a ledger row: the label, the evidence method and the command are in the published ledger.

| CAPABILITY                           | EVIDENCE                                                                                                                                                                                                                                    | STATE    |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| Cloudflare estate inventory          | 16 zones and 322 proxied hosts in the account; the estate inventory classifies the hosts as 120 live with real content, 60 stubs, 121 dead, 12 blocked, 9 dark.                                                                             | MEASURED |
| platform.unykorn.org registry counts | The platform page describes a namespace registry; it publishes no registry.json or health.json (both paths return the page itself), so no site, system or apex count from it is used. The counts above come from the DNS inventory instead. | ABSENT   |

# Trust and safeguards

Credentials for the account are held by the founder; deploy tokens are scoped; secrets are never committed. Incidents are written up in the receipts; each produced a rule, not a blame.

# Economics

The estate is a cost center that makes the revenue lines auditable. It has no prices of its own.

# Next phase

Schedule the gate nightly with a public diff; move to Workers Paid; retire or redirect the dead hosts the inventory lists; finish moving every remaining Worker's source into the repository so nothing exists only on Cloudflare; publish a real registry endpoint on the platform.

UnyKorn LLC is a technology and administration service provider. It is not a bank, broker-dealer, exchange, custodian, trustee, transfer agent, appraiser, auditor, investment adviser, money transmitter, or issuer. Nothing in this report is an offer, a solicitation, legal advice, or a promise of any outcome. Client engagements conducted under separate operating entities are not included.

UnyKorn LLC, a Wyoming limited liability company formed July 1, 2026 (Wyoming filing 2026-002019968). Edition 1.1, September 2026. Every figure in this report is bound to a row in the evidence ledger; the whole ledger is published at /report/ledger.json. Anything that could not be resolved to a re-runnable command, an API response, an on-chain read or a hashed document with a date is labelled honestly or omitted. Corrections: hello@blockchainfraud.org.

- MEASURED produced by a command, API call or on-chain read recorded in the ledger row and re-runnable today
- CAPABILITY code exists, builds, tests pass or a document states it; no production measurement
- IN DEVELOPMENT incomplete, with a named remaining gap
- GATED complete, blocked on a step outside the software; the blocker class is named, the counterparty is not
- TARGET forward-looking; carries a target date
- ABSENT deliberately not built or not on file; the reason is stated
- EXTERNAL a third-party fact with URL, retrieval date and a verbatim quote of at most 25 words
